# FACULTATEA CALCULATOARE, INFORMATICA SI MICROELECTRONICA

#### Universitatea Tehnica a Moldovei

### Medii Interactive de Dezvoltare a Produselor Soft

Lucrarea de laborator#4

# Dezvoltarea unei aplicatii mobile

Autor:
Toma Ana

lector asistent: Irina Cojanu lector superior: Radu Melnic

## 1 Scopul lucrarii de laborator

Realizarea unui joc.

### 2 Objective

1. Cunostinte de baza privina arhitectura unei aplicatii mobile 2. Cunostinte de baza ale platforme<br/>i ${\rm SDK}$ 

#### 3 Mersul lucrarii de laborator

#### 3.1 Analiza Lucrarii de laborator

Linkul la repozitoriu https://github.com/TomaAna/MIDPS
Pentru a crea joaca am folosit mediul de dezvoltare integrat unity.
Am creat o joaca 3D ,am creat un cub de culoare verde,pe care am incercat sa-l misc in dreapta si in stinga cu ajutorul codului de mai jos.

#### 3.2 Playmovement.cs

```
using UnityEngine;
public class PlayerMouvement : MonoBehaviour {
public Rigidbody rb;
public float forwardForce = 2000f;
public float sidewaysForce= 500f;
public float car=00f;
// Use this for initialization
/*void Start () {
rb.AddForce (0,200,500);
}*/
// Update is called once per frame
void Update ()
rb.AddForce (0, 0, forwardForce * Time.deltaTime);
if(Input.GetKey("d"))
rb.AddForce (sidewaysForce * Time.deltaTime, 0, 0,ForceMode.VelocityChange);
}
if(Input.GetKey("a"))
rb.AddForce (-sidewaysForce * Time.deltaTime, 0, 0,ForceMode.VelocityChange);
if(Input.GetKey("w"))
```

```
rb.AddForce (car * Time.deltaTime, 0, 0);
}
}
```

Urmatorul fisier pe care l-am creat este:

#### 3.3 PlayerP

```
using UnityEngine;
public class PlayerP : MonoBehaviour {

public Transform player;
public Vector3 offset;

// Update is called once per frame
void Update () {

//transform.position = player.position + offset;
}
}
```

Al treilea fisier care l-am creat, scrie pe ecran cind cubul se loveste de obstacole.

#### 3.4 Player3

```
using System.Collections;
using System.Collections.Generic;
using UnityEngine;

public class Player3 : MonoBehaviour
{
  public PlayerMouvement movement;
  void OnCollisionEnter(Collision collisionInfo)
{
  if (collisionInfo.collider.tag == "obstacole");
```

```
{
Debug.Log ("we hit an obstacle!");
}
}
```

Concluzie: In urma efectuarii lucrarii de laborator numarul 4 la MIDP am studiat crearea unei aplicatii mobile.

Am analizat un mediu de dezvoltare integrat nou,unity,astfel am acumulat mai multa experinta in lucrul cu limbajul de programare c.
